+corro

Product protection & corrosion protection in one.

+ corro

Every molded fiber product can be provided with corrosion protection for steel and non-ferrous metals according to your requirements. An effective release of the VCI active ingredient via the front and back of the molded fiber product ensures uniform corrosion protection. Due to the natural deposit effect of a molded fiber product, the anti-corrosion atmosphere is established even after repeated opening of the packaging.

+**corro** is the clever way to combine proven product protection and corrosion protection.

Benefits

- Combination of VCI corrosion protection and proven product protection
- Rapid build-up of an anticorrosive atmosphere thanks to a 3D concept on both sides
- The VCI deposit effect of the molded fiber product guarantees corrosion protection after repeated opening of the packaging
- Effective corrosion protection on contact and at a distance
- Developed for long storage and overseas shipping
- VCI-active ingredient free of nitrite, amines and other substances listed in TRGS* 900
- VCI active ingredient without unpleasant odour
- Elimination of complex additional and cost-intensive additions of corrosion inhibitors in the packaging
- Every type of molded fiber can be equipped with corrosion protection according to your requirements

* Technical Rules for Hazardous Substances
